Added more tolerance for belts to run freely without rubbing on tensioners wall. I don't think that it is weaker than original, but I'd recommend you to print them with 6 perimeters and more infill than usual (just in case.) They don't move, so weight is not a problem. I printed mine from PC with 6 walls and 45% cubic infill.

I provided photos with comparasion of original and my remixed model.

Installation is the same as before.
