The Voron V0.2 nema 17 mount is a modification of the Voron v0.2 nema 14 mount. I have not yet created support for the hinges.

The bottom can be screwed to the corner frame using a m3x8 Socket Head screw.

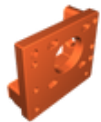

The m3x25 button head screw containing the bearings can be tightened (not too tight) using an m3 hex nut.

The tensioners are compatible with the tensioner knobs provided on the voron github.
