updated 21. 2. 2024 | published 21. 2. 2024

Summary

Purely aesthetic, snaps in place. No nuts :)

Clips into place on 1515 extrusion. These won't really reinforce the frame but rather make it look nice. While popping into place, a few of mine cracked along the layer lines, but are still hold just fine. File should already be oriented into the ideal printing position, which you shouldn't change; you may cause the clips to break off completely.
